*SUGGESTED SOLUTIONS TO* MIDTERM EXAM 2 *100pts.*  
MATH 201 VER \*\*\*\*

- There are 6 pages in the exam including this page.
- Write all your answers clearly. You have to show work to get points for your answers.
- Read all the questions carefully and make sure you answer all the parts.
- You can write on both sides of the paper. Indicate that the answer follows on the back of the page.
- Use of Calculators is *not* allowed during the exam.

(1) ...../22

(2) ...../20

(3) ...../22

(4) ...../36

Total ...../100

(1) 22 pts. Let  $A = \begin{bmatrix} 2 & 2 & -1 \\ 1 & 0 & 0 \\ 4 & 1 & 0 \end{bmatrix}$ .

(a) Find the determinant of  $A$ . Show work.

Expanding along third column

$$\det A = (-1) \cdot (1 \cdot 1 - 4 \cdot 0) = -1$$

(b) Find the classical adjoint of  $A$ . Show work

$$\text{Adj } A = \begin{bmatrix} \begin{vmatrix} 0 & 0 \\ 1 & 0 \end{vmatrix} & -\begin{vmatrix} 1 & 0 \\ 4 & 0 \end{vmatrix} & \begin{vmatrix} 1 & 0 \\ 4 & 1 \end{vmatrix} \\ -\begin{vmatrix} 2 & -1 \\ 4 & 0 \end{vmatrix} & \begin{vmatrix} 2 & -1 \\ 4 & 0 \end{vmatrix} & -\begin{vmatrix} 2 & 2 \\ 4 & 1 \end{vmatrix} \\ \begin{vmatrix} 2 & -1 \\ 0 & 0 \end{vmatrix} & -\begin{vmatrix} 2 & -1 \\ 1 & 0 \end{vmatrix} & \begin{vmatrix} 2 & 2 \\ 1 & 0 \end{vmatrix} \end{bmatrix}^T$$

The symbol

$|A|$  denotes  
determinant  
of the matrix

$$= \begin{bmatrix} 0 & 0 & 1 \\ -1 & +4 & 6 \\ 0 & -1 & -2 \end{bmatrix}^T = \begin{bmatrix} 0 & -1 & 0 \\ 0 & +4 & -1 \\ 1 & 6 & -2 \end{bmatrix} A.$$

(c) What is the inverse of  $A$ ? Show work.

Inverse of  $A$  exists since  $\det A \neq 0$

$$A^{-1} = \frac{\text{Adj } A}{\det A} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & -4 & 1 \\ -1 & -6 & 2 \end{bmatrix}$$

(2) 20 pts. Let  $\mathcal{P}_1$  be the set of polynomials with degree less than or equal to 1, that is,  $\mathcal{P}_1 = \{f(t) = a_0 + a_1t : a_0, a_1 \in \mathbb{R}\}$ . Then both  $\mathcal{B}_1 = \{1, t\}$  and  $\mathcal{B}_2 = \{1, t-1\}$  are bases of  $\mathcal{P}_1$ .

(a) What is the  $S$  matrix that transforms a vector in  $\mathcal{B}_2$ -coordinates into  $\mathcal{B}_1$ -coordinates. Show work.

We need to write basis elements of  $\mathcal{B}_2$  in terms of  $\mathcal{B}_1$  basis;  $1 = 1 \cdot 1 + 0 \cdot t$   
 $t-1 = -1 \cdot 1 + 1 \cdot t$

$$\text{Therefore, } S = \begin{bmatrix} 1 & -1 \\ 0 & 1 \end{bmatrix}$$

(b) Let  $T : \mathcal{P}_1 \rightarrow \mathcal{P}_1$  be the transformation defined as  $T(a_0 + a_1t) = a_0 + a_1(2t-1)$ . Find the matrix  $B$  of the transformation  $T$  with respect to the basis  $\mathcal{B}_2$ . Show work.

The matrix of  $T$  w.r. to  $\mathcal{B}_2 = \left[ \begin{array}{c} [T(1)]_{\mathcal{B}_2} \\ [T(t-1)]_{\mathcal{B}_2} \end{array} \right]$

$$\text{Now, } [T(1)]_{\mathcal{B}_2} = [1 \cdot 1 + 0 \cdot (t-1)]_{\mathcal{B}_2} = \begin{bmatrix} 1 \\ 0 \end{bmatrix} \quad B = \begin{bmatrix} 1 & 0 \\ 0 & 2 \end{bmatrix}$$

$$[T(t-1)]_{\mathcal{B}_2} = [-(1) + 2(t-1)]_{\mathcal{B}_2} = [2t-2]_{\mathcal{B}_2} = [0 \cdot 1 + 2(t-1)]_{\mathcal{B}_2} = \begin{bmatrix} 0 \\ 2 \end{bmatrix}$$

(c) Let  $f \in \mathcal{P}_1$  be written as  $[f]_{\mathcal{B}_2} = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$  in  $\mathcal{B}_2$ -coordinates. Let  $T$  be as in part (b), then find  $[T(f)]_{\mathcal{B}_1}$ , that is, find  $T(f)$  in  $\mathcal{B}_1$ -coordinates. Show work.

$$\begin{aligned} [T(f)]_{\mathcal{B}_1} &= S [T(f)]_{\mathcal{B}_2} = S B [f]_{\mathcal{B}_2} \\ &= \begin{bmatrix} 1 & -1 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 0 & 2 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} \\ [T(f)]_{\mathcal{B}_1} &= \begin{bmatrix} -1 \\ 2 \end{bmatrix} \end{aligned}$$

- (3) 22pts. (a) Let  $\left\{ \begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix} \right\}$  and  $\left\{ \begin{bmatrix} 0 \\ 1 \\ 2 \\ 1 \end{bmatrix}, \begin{bmatrix} -2 \\ -1 \\ 0 \\ -1 \end{bmatrix} \right\}$  be two different sets in  $\mathbb{R}^4$  spanning the same subspace. Which of these two sets are orthogonal? Show work.

$$\begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix} \cdot \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix} = 0 \quad \text{and} \quad \begin{bmatrix} 0 \\ 1 \\ 2 \\ 1 \end{bmatrix} \cdot \begin{bmatrix} -2 \\ -1 \\ 0 \\ -1 \end{bmatrix} = -1 - 1 = -2 \neq 0$$

$\therefore \left\{ \begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix} \right\}$  is a orthogonal set.

- (b) Let  $\left\{ \begin{matrix} \vec{v}_1 \\ \begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix} \\ \vec{v}_2 \\ \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix} \\ \vec{v}_3 \\ \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} \end{matrix} \right\}$  be a basis of a subspace  $V$  of  $\mathbb{R}^4$ . Find an orthonormal basis of  $V$ . Show work.

$$\vec{u}_1 = \frac{1}{\|\vec{v}_1\|} \begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix} = \frac{1}{\sqrt{2}} \begin{bmatrix} -1 \\ 0 \\ 1 \\ 0 \end{bmatrix}, \quad \text{since } \vec{v}_1 \cdot \vec{v}_2 = 0$$

$$\vec{u}_2 = \frac{1}{\|\vec{v}_2\|} \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix}$$

$$\vec{u}_3 = \frac{\vec{v}_3^\perp}{\|\vec{v}_3^\perp\|} = \frac{\vec{v}_3 - (\vec{v}_3 \cdot \vec{u}_1) \vec{u}_1 - (\vec{v}_3 \cdot \vec{u}_2) \vec{u}_2}{\|\vec{v}_3^\perp\|}$$

$$= \frac{1}{\|v_3\|} \left[ \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} - \left( \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} \cdot \begin{bmatrix} -1/\sqrt{2} \\ 0 \\ 1/\sqrt{2} \\ 0 \end{bmatrix} \right) \frac{1}{\sqrt{2}} \begin{bmatrix} 1 \\ 0 \\ 1 \\ 0 \end{bmatrix} \right]$$

$$= \frac{1}{\|v_3\|} \left[ \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} - \left( \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} \cdot \begin{bmatrix} 1/2 \\ 1/2 \\ 1/2 \\ 1/2 \end{bmatrix} \right) \begin{bmatrix} 1/2 \\ 1/2 \\ 1/2 \\ 1/2 \end{bmatrix} \right]$$

$$= \frac{1}{\|v_3\|} \left( \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix} - \frac{1}{2} \begin{bmatrix} 1 \\ 0 \\ 1 \\ 0 \end{bmatrix} - \frac{1}{2} \begin{bmatrix} 1/2 \\ 1/2 \\ 1/2 \\ 1/2 \end{bmatrix} \right)$$

$$\vec{u}_3 = \frac{1}{\|v_3\|} \begin{pmatrix} 1/4 \\ -1/4 \\ 1/4 \\ -1/4 \end{pmatrix} = \frac{1}{1/2} \begin{bmatrix} 1/4 \\ -1/4 \\ 1/4 \\ -1/4 \end{bmatrix} = \begin{bmatrix} 1/2 \\ -1/2 \\ 1/2 \\ -1/2 \end{bmatrix}$$

$$\left\{ \begin{bmatrix} -1/\sqrt{2} \\ 0 \\ 1/\sqrt{2} \\ 0 \end{bmatrix}, \begin{bmatrix} 1/2 \\ 1/2 \\ 1/2 \\ 1/2 \end{bmatrix}, \begin{bmatrix} 1/2 \\ -1/2 \\ 1/2 \\ -1/2 \end{bmatrix} \right\} \text{ is a}$$

orthonormal basis.

(4) 36 pts. These are all short answer questions. Explain your answer. Each of these problems is worth 12 points.

(a) Let  $\det \begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix} = 6$ . Find  $\det \begin{bmatrix} a-d & b-e & c-f \\ g & h & i \\ 4d & 4e & 4f \end{bmatrix}$ . Explain your answer.

The matrix  $\begin{bmatrix} a-d & b-e & c-f \\ g & h & i \\ 4d & 4e & 4f \end{bmatrix}$  is obtained

From  $\begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix}$  by (i) adding two rows ( $R_1 - R_2$ ) (does not change determinant)

(ii) exchanging  $R_2$  &  $R_3$  multiplies determinant by  $-1$

(iii) multiplying  $R_3$  by 4 multiplies det. by 4

$$\therefore \det \begin{bmatrix} a-d & b-e & c-f \\ g & h & i \\ 4d & 4e & 4f \end{bmatrix} = 6 \cdot (-1) \cdot 4 = -24$$

(b) The space of polynomials of degree less than or equal to 1,  $\mathcal{P}_1$  is isomorphic to the space of complex numbers  $\mathbb{C} = \{a + bi : a, b \in \mathbb{R}\}$ . State true or false. Give reasons.

TRUE

The space  $\mathcal{P}_1 = \{a_0 + a_1 t \mid a_0, a_1 \in \mathbb{R}\}$  is a 2 dimensional vector space with a basis  $\{1, t\}$ .

$\mathbb{C}$  is a 2-dimensional vector space with a basis  $\{1, i\}$ . and are hence isomorphic.

Alternately

Define  $T: \mathcal{P}_1 \rightarrow \mathbb{C}$  as  
 $a_0 + a_1 t \rightarrow a_0 + i a_1$

$$\begin{aligned} \text{Then, } T(c_1(a_0 + a_1 t) + c_2(b_0 + b_1 t)) &= c_1 a_0 + i c_1 a_1 + c_2 b_0 + i c_2 b_1 \\ &= c_1(a_0 + i a_1) + c_2(b_0 + i b_1) \\ &= c_1 T(a_0 + a_1 t) + c_2 T(b_0 + b_1 t) \end{aligned}$$

Then  $T$  is a linear transformation

and  $T(a_0 + ia_1t) = 0 = 0 + i0$

$$\Rightarrow a_0 + ia_1 = 0 + i0$$

$$\Rightarrow a_0 = a_1 = 0$$

$\Rightarrow T$  is one-one.

Also for any  $a + ib \in \mathbb{C}$   
there is  $a + bt \in P_1$  s.t.  $T(a + bt)$   
 $= a + ib$

$\therefore T$  is onto.

Hence  $T$  is an isomorphism.

(One can also just note that  
the linear matrix of the linear  
transf. w. respect to basis  $\{1, t\}$  &  $\{1, i\}$   
is given by  $\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$  which is  
invertible.)

(c) Find the volume of the parallelepiped which has the vectors  $\begin{bmatrix} 2 \\ -1 \\ 1 \end{bmatrix}$ ,  $\begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$  and  $\begin{bmatrix} 0 \\ 2 \\ 0 \end{bmatrix}$  as three edges. Show work and explain your answer.

Volume of a parallelepiped formed by  $\vec{v}_1, \vec{v}_2, \vec{v}_3$

$$= \left| \det \begin{bmatrix} \vec{v}_1 & \vec{v}_2 & \vec{v}_3 \end{bmatrix} \right|$$

$$= \left| \det \begin{bmatrix} 2 & 1 & 0 \\ -1 & 2 & 2 \\ 1 & 1 & 0 \end{bmatrix} \right|$$

$$= \left| 2 \cdot (-2) + (-1)(-2) + 0 \cdot (-3) \right|$$

$$= \left| -4 + 2 \right| = 2$$
